SUMMARY

Aspiring AI/ML intern with knowledge of Python and fundamental Machine Learning concepts. Have explored LLMs, LangChain, and RAG-based systems at a basic level. Also experienced in building backend applications using Django and MySQL. Looking for an opportunity to gain practical industry experience and strengthen AI development skills.

Technical Skills

Programming Languages: Python, Machine Learning, HTML, CSS,

Frameworks: Django

AI: NLP, LangChain, LLM,RAG

Databases: Postgresql

Libraries: scikit-learn, NLTK, spaCy, pandas, numpy,matplotlib

Tools: VS Code, PyCharm

Experience

IBM Skillsbuild (virtual)
Prompt Engineering(Internship)

16 Dec - 30 Dec 2024

Overseas IT Solution
AI/ML Developer Intern

1 Jan – Present

Projects

RAG Pipeline using PDF Context

- Developed an end-to-end RAG pipeline for accurate question answering over custom document datasets.
- Designed a document ingestion pipeline with preprocessing, chunking, and embedding to enable efficient retrieval.
- Implemented hybrid retrieval using BM25 (sparse retrieval) and semantic search (dense embeddings) to improve recall.
- Integrated a Cross-Encoder re-ranking model to refine retrieved results and boost answer relevance.
- Leveraged LLMs to generate context-aware responses grounded in retrieved documents, reducing hallucinations.

Technology Stack:

Python,Langchain , RAG , Faiss, Streamlit

Serp Intelligence AI Powered Seo Tool

- Developed an AI-powered SEO automation platform for keyword research, SERP analysis, and content optimization.
- Integrated SERP API to scrape real-time search engine result data for competitor and ranking analysis.
- Built automated keyword extraction and clustering pipeline based on search intent and relevance.
- Generated AI-based content briefs using keyword trends, competitor insights, and SERP structure analysis.

TechnologyStack:

Python , Pinecone , Serp, Llama-3.3-70b-versatile (llm) , Langchain, RAG

Smarthire AI Resume Predictor:

- Developed an AI-powered resume screening web application using Django that allows users to upload resumes for automated analysis.
- Implemented skill extraction logic to identify key skills from resumes and match them against job requirements.
- Designed a scoring system to evaluate candidate suitability based on skill matching.
- Integrated backend processing with database storage for managing user data and results.

TechnologyStack: Django

Education

B.Tech Information Technology
Silver Oak University

CGPA:8.54
